Assembler run totals	1445	00:00:01.82	00:00:04.45

The working set limit was 1900 pages.
61016 bytes (120 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 328 non-local and 6 local symbols.
176 source lines were read in Pass 1, producing 31 object records in Pass 2.
17 pages of virtual memory were used to define 16 macros.

Pass 2	87	00:00:00.60	00:00:01.23
Symbol table output	2	00:00:00.03	00:00:00.06
Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	3	00:00:00.03	00:00:00.03
Assembler run totals	1680	00:00:03.00	00:00:06.32

The working set limit was 2400 pages.
136309 bytes (267 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1209 non-local and 11 local symbols.
517 source lines were read in Pass 1, producing 77 object records in Pass 2.
18 pages of virtual memory were used to define 17 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	1
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]PAMAC.MLB;1	0

Symbol table output	2	00:00:00.03	00:00:00.09
Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	4	00:00:00.14	00:00:00.24
Assembler run totals	1520	00:00:02.58	00:00:05.94

The working set limit was 2900 pages.
88335 bytes (173 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 396 non-local and 5 local symbols.
571 source lines were read in Pass 1, producing 44 object records in Pass 2.
34 pages of virtual memory were used to define 27 macros.

Macro library statistics

Macro library name	Macros defined

Assembler run totals	1899	00:00:04.79	00:00:09.76

The working set limit was 2900 pages.
208285 bytes (407 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1159 non-local and 30 local symbols.
638 source lines were read in Pass 1, producing 83 object records in Pass 2.
38 pages of virtual memory were used to define 37 macros.

                     67 ;     09   FIX BUG IN $DS_SETPRT
                     68 ;     10   Removed dependence of MAPFREE on L$L_UNITS
                     69 ;
                     70 ;     11   Added processor dependent I/O space mapping
                     71 ;          Roger Riggs     6-Sept-1979
                     72 ;     12   Added IO$CQ_PHYSICAL, used to determine where to map
                     73 ;          I/O space in P1 space.
                     74 ;          Roger Riggs, 24-Jan-1980,  Version 5.2
                     75 ;     12   Re-arranged system page table to allow system space addresses
                     76 ;          to map 1 for 1 P0 addresses in the range ^X10000 to the
                     77 ;          top of the P0 page tables.  References to this range will
                     78 ;          reference the same addresses with or without memory management
                     79 ;          enabled.
                     80 ;          Roger Riggs, 5-Mar-1980, Version 5.3
                     81 ;     13   Made page at APT$AT_APTTXT valid, effects APT when
                     82 ;          Memory Management is on.
                     83 ;          Roger Riggs, 12-Mar-1980, Version 5.3
                     84 ;     14   Added byte to save state of memory management, allows
                     85 ;          Memory management to be enabled or disabled after cleanup
                     86 ;          to restore it to what the operator indicated.
                     87 ;          Also if the operator enabled memory management then the program
                     88 ;          is not allowed to turn it off.  DS$GB_MM_ENB is set
                     89 ;          by CLI command SET MM ON and SET MM OFF.
                     90 ;          Also added routines and support for XDELTA
                     91 ;          Roger Riggs, 21-May-1980, Version 5.4
                     92 ;     15   Removed upper limit on amount of memory checked
                     93 ;          Fix DS$EXPREG to set the protection of pages allocated to UW.
                     94 ;          In DS$MMON AND DS$MMOFF return the previous state of MM as
                     95 ;          SS$_WASSET OR SS$_WASCLR and return DS$_WARNING from
                     96 ;          DS$MMOFF if operator set MMON and program is disallowed from
                     97 ;          turning it off. Add code to flush the translation buffer
                     98 ;          before turning MM ON, Set protections on stacks so
                     99 ;          underflows will can be caught by MM.
                    100 ;
                    101 ;          Dave Butenhof   17-Jul-1980
                    102 ;     16   Call MAPFREE from MAPMEM to free up memory; to allow
                    103 ;          GETBUF from Supervisor before program is loaded.
                    104 ;          Specifically, for HELP utility.
                    105 ;
                    106 ;          Roger Riggs, 17-Sep-1980, Version 6.0
                    107 ;     17   Changed MAPFREE to check program loaded flag to determine
                    108 ;          how much of low memory to map.
                    109 ;
                    110 ;          Dave Butenhof, 23-Feb-1981, version 6.3
                    111 ;     18   Change a word-relative to longword-relative.
                    112 ;     19   Fix two bugs: in EXE$SETPRT, correct return address array
                    113 ;          start address--BICL3 first two operands were reversed.
                    114 ;          In EXE$CNTREG, Comparison of P0 and P1/SYS PTE resulted in
```

```
0000    115 ;               ERRSUP if M bit was altered, and ignored V and PFN; fix the
0000    116 ;               compare mask.
0000    117 ;
0000    118 ;               - Dave Butenhof, 08-Jun-1981, version 6.4
0000    119 ;       20      Fix SETPRT some more.  Do a CHMK to force cpu
0000    120 ;               to KERNEL mode, so we can use MFPR.
0000    121 ;
0000    122 ;       21      - dave butenhof, 3-sep-1981, version 6.5
0000    123 ;               alter to use DS with new XDELTA
0000    124 ;
0000    125 ;       22      Jack Stansbury, Version 6.8, May 20, 1982
0000    126 ;               Add an entry point to the ExpReg routine for use by CRD.
0000    127 ;               In stand-alone, ExpReg was allocating space beginning at 200,
0000    128 ;               which is a no-no! Fix it to expand above the Supervisor (as it
0000    129 ;               does on-line).
0000    130 ;
0000    131 ;       23      Richard Brown, Version 6.8, 25-June-82
0000    132 ;               Addition of routines which map a block
0000    133 ;               of memory for the debugger to use.
0000    134 ;
0000    135 ;       24      Richard Brown, Version 6.9, 4-August-82
0000    136 ;               Addition of routine to deallocate memory assigned
0000    137 ;               to the debugger's symbol tables.
0000    138 ;
0000    139 ;       25      Bob Bergazzi    5-Aug-82        Version 6.9
0000    140 ;               Changed MAPFREE to call DSR$CheckLoad (SHOWMEM)
0000    141 ;               to see if a program is loaded - fixes "SET MM ON,
0000    142 ;               ATTACH, Translation not valid fault" bug.
0000    143 ;
0000    144 ;       26      Jack Stansbury  25-Aug-1982     Version 6.9
0000    145 ;               Added two other vaisbles: DS$GL_Actual_MemSize and
0000    146 ;               DS$GL_Set_MemSize. The former is the actual size of the memory
0000    147 ;               of the machine. The latter is the size that the operator wishes
0000    148 ;               to set the memory. Also added .Library statements, and changed
0000    149 ;               the PSect from SEP to what they should be. Also changed the
0000    150 ;               insufficient memory message from a PrintF to a Print.
0000    151 ;
0000    152 ;       27      Jack Stansbury  25-Aug-1982     Version 6.9
0000    153 ;               Fixed several truncation errors.
0000    154 ;
0000    155 ;       28      Bob Bergazzi    2-Nov-1982      Version 6.9
0000    156 ;               Changed the ACCESSABLE routine so that it only copies the
0000    157 ;               first quadword of a page rather than every quadword on the
0000    158 ;               page. This results in considereble savings of startup time,
0000    159 ;               especially for NEBULA systems with large amounts of memory
0000    160 ;               (greater than 3 Meg took longer than 10 seconds, causing
0000    161 ;               APT to consider the supervisor hung).
0000    162 ;
0000    163 ;       29      Bob Bergazzi    29-Aug-1983     Version 6.13
0000    164 ;               Changed the value of the minimum memory size required from
0000    165 ;               256K to 512K bytes.
0000    166 ;
0000    167 ;       30      Bob Bergazzi    26-Dec-1984     Version 8.0
0000    168 ;               Turned interrupts off during the STACKPROT routine. If
0000    169 ;               a clock interrupt (or any other interrupt) happened
0000    170 ;               while memory management was turned on in this routine,
0000    171 ;               the console detects an interrupt stack not valid and halts.
```

```
0000    172 ;               because this routine sets protection no access before it
0000    173 ;               resets it correctly.
0000    174 ;
0000    175 ;       31      Domenic Andella 30-Jan-1985     Version 8.1
0000    176 ;               Modified routine EXE$EXPREG to receive additional
0000    177 ;               argument when called via $DS_GETBUF or $DS_GETSYSBUF.
0000    178 ;               Each pages PTE will be marked to indicate which service
0000    179 ;               was called.
0000    180 ;               Modified routine EXE$CNTREG to receive additional
0000    181 ;               argument when called via $DS_RELBUF or $DS_GETSYSBUF
0000    182 ;               in order to control deallocation of pages.
0000    183 ;
0000    184 ;       32      Domenic Andella 28-May-1985     Version 8.2
0000    185 ;               Modified routines DSX$MMON/OFF to prohibit
0000    186 ;               use if active mp system.
0000    187 ;
0000    188 ;       33      Ted Salem       18-September-1985  Version 8.2
0000    189 ;               Modified above change (#32) to prohibit
0000    190 ;               the change of status of memory management rather
0000    191 ;               than prohibit the use of DSX$MMON/OFF services.
0000    192 ;
0000    193 ;       34      Bob Bergazzi    21-NOV-85       Version 9.0
0000    194 ;               Changed first SOBGTR in the EXE$EXPREG routine so that a
0000    195 ;               GETBUF which asks for all memory will get it. It was off
0000    196 ;               by one.
0000    197 ;                                                                       ;G:2
0000    198 ;       35      Domenic Andella 4-Apr-1986      Version 10.0            ;G:2
0000    199 ;               For DS$_RELSYSBUF service reset prot of deallocated     ;G:2
0000    200 ;               page to full access (UW). This is necessary for mp      ;G:2
0000    201 ;               systems that use the service and modify protection      ;G:2
0000    202 ;               codes for an Attached processors SCB and stacks.        ;G:2
0000    203 ;                                                                       ;G:2
0000    204 ;       36      M. Baggett      5-Jun-1986      Version 10.1            ;G:3
0000    205 ;               Do not allow set memory management on RT-VAX.           ;G:3
0000    206 ;                                                                       ;G:4
0000    207 ;       37      Ted Salem       27-June-1986    Version 10.1            ;G:4
0000    208 ;               Changed the method used to Map P0 space for Andromeda   ;G:4
0000    209 ;               Also commented out change #36 for temp fix.             ;G:4
0000    210 ;                                                                       ;G:6
0000    211 ;       38      Doug Silver     8-Aug-1986      Version 10.1            ;G:6
0000    212 ;               Changed MAPMEM to check increments of 1 Meg until no    ;G:6
0000    213 ;               access and then check from last good memory access in   ;G:6
0000    214 ;               increments of 1 K.  This way, each full Meg will only   ;G:6
0000    215 ;               have to be checked 1 time for accessability instead of  ;G:6
0000    216 ;               1024 times.                                             ;G:6
0000    217 ;                                                                       ;G:7
0000    218 ;       39      M. Baggett      7-Oct-1986      Version 10.3            ;G:7
0000    219 ;               Set special case for RTUVAX memory management.          ;G:7
0000    220 ;                                                                       ;G:9
0000    221 ;       8       Stephen Meier   29-Dec-1987     Version 10.11           ;G:8
0000    222 ;               Make sure that Page tables are built at the end of memory for ;G:8
0000    223 ;               LLL's CCA.                                              ;G:8
0000    224 ;                                                                       ;G:9

```
The working set limit was 2900 pages.
244061 bytes (477 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1304 non-local and 103 local symbols.
1883 source lines were read in Pass 1, producing 114 object records in Pass 2.
44 pages of virtual memory were used to define 37 macros.

Assembler run totals	1688	00:00:04.56	00:00:07.39

The working set limit was 2900 pages.
172785 bytes (338 pages) of virtual memory were used to buffer the intermediate code.
There were 90 pages of symbol table space allocated to hold 1690 non-local and 16 local symbols.
592 source lines were read in Pass 1, producing 109 object records in Pass 2.
20 pages of virtual memory were used to define 19 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	1
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]PAMAC.MLB;1	0

0000    34 ; FACILITY:     VAX DIAGNOSTIC SUPERVISOR.
0000    35 ;
0000    36 ; ABSTRACT:
0000    37 ;
0000    38 ; ENVIRONMENT:
0000    39 ;
0000    40 ; AUTHOR:       Roger Riggs     20-FEB-79       VERSION 01.
0000    41 ;
0000    42 ;       01      Added MAP$IOSPACE to fix up memory management
0000    43 ;               database for I/O adapters present.
0000    44 ;               M. Hougate      25-Jun-79
0000    45 ;       02      Added UBA750 specific PURGE code
0000    46 ;               Roger Riggs, 24-Jan-1980, Version 5.2
0000    47 ;       03      Added definition of value DS$CK_USOVR, for
0000    48 ;               WAITUS clock overhead.
0000    49 ;               Roger Riggs, 15-Feb-1980, Version 5.2
0000    50 ;       04      Fixed QIOCLEAN_CPU to correctly restore the SCB
0000    51 ;               Roger Riggs, 1-APR-1980
0000    52 ;       05      Fixed so gets true adapter type from address in DSP$CONFIG_ADP
0000    53 ;               Roger Riggs, 13-SEP-80, Version 6.0
0000    54 ;       06      Added code to QIO$CLEAN_CPU to reset UBI and massbus
0000    55 ;               adapters.
0000    56 ;               Dave Butenhof, 11-dec-1980, version 6.2
0000    57 ;       07      Fix DSP$CONFIG_ADP, to use $DS_RH750 PTdesc instead of
```

```
0000     58 ;               $DS_RH780; also configure correct unit of RH750, not
0000     59 ;               arbitrarily unit 0.
0000     60 ;               Dave Butenhof, 05-May-1981, version 6.4
0000     61 ;       08      Fix edit 07 to function correctly
0000     62 ;       09      Marion Baggett, 21-Sept-81 version 6.5
0000     63 ;               Allow access to 11/750 unibus address space
0000     64 ;
0000     65 ;               - Dave Butenhof, 1-Dec-1981, version 6.5
0000     66 ;       10      Insert .LIBRARY statements for libraries
0000     67 ;
0000     68 ;       11      M. Baggett      8-Dec-1982      version 6.10
0000     69 ;               Changed 2 BSBW's to JSB's to fixed trucation errors.
0000     70 ;
0000     71 ;       12      Bob Bergazzi    2-Mar-1983      version 6.10 (edit 323)
0000     72 ;               MAP$IOSPACE messes up the stack somehow when it tries
0000     73 ;               to map F00000, and when we have a real PCS loaded.
0000     74 ;               Fix: Don't start mapping at F00000, start at F20000,
0000     75 ;               where the IO adapters really are.
0000     76 ;
0000     77 ;       13      M. Baggett      2-March-1983    version 6.11
0000     78 ;               Added support for CI750 adapter.
0000     79 ;
0000     80 ;       14      Bob Bergazzi    April 26, 1983  Version 6.11
0000     81 ;               Added ONLY_SCB routine for VENUS. Does nothing for COMET.
0000     82 ;
0000     83 ;       15      Bob Bergazzi    May 16,1983     Version 6.11
0000     84 ;               Changed the order of the .LIB statements.
0000     85 ;
0000     86 ;       16      M.Baggett       May 18, 1983    Version 6.11
0000     87 ;               Change the maintenance field to match 11/780.
0000     88 ;
0000     89 ;       17      M. Baggett      May 21, 1983    Version 6.11
0000     90 ;               Changes to CI750 code.
0000     91 ;
0000     92 ;       18      Bob Bergazzi    Jan. 25, 1984   Version 6.14
0000     93 ;               Added ONLY_CLOCK_INIT routine, which reads the TODR.
0000     94 ;               We no longer want to MFPR the TODR in CLK$RE_INIT
0000     95 ;               because not all cpus read the TODR with an MFPR.
0000     96 ;               Also, TODR is now defined by $PR750DEF as PR750$_TODR,
0000     97 ;               and for the 750, if the TODR read as 0, we must write
0000     98 ;               a positive number to it, in order to start it counting.
0000     99 ;
0000    100 ;       19      Bob Bergazzi    May 9, 1984     Version 7.0
0000    101 ;               Added UBINTSZ in order to remove code from QIO.
0000    102 ;
0000    103 ;       20      Bob Bergazzi    Aug. 27, 1984   Version 7.1
0000    104 ;               Removed ONLY_CLOCK_INIT routine.
0000    105 ;
0000    106 ;       21      Bob Bergazzi    Aug. 29, 1984   Version 7.1
0000    107 ;               Added HDW_CLOCK_SET routine. Does nothing for 11/750.
0000    108 ;
0000    109 ;       22      Bob Bergazzi    Oct. 25, 1984   Version 7.1
0000    110 ;               Added EXE$GL_TENUSEC and EXE$GL_UBDELAY values for use by
0000    111 ;               bootdrivrs that use the TIMEDWAIT macro (PABTDRIVR).
0000    112 ;
0000    113 ;       23      Ron Perker      1-NOV-1984
0000    114 ;               Fixed truncation errors
```

```
                        0000   115 ;
                        0000   116 ;       24      RE Muse         Nov.7,1984      version 7.1
                        0000   117 ;               This psect was originally in the kernel module and now
                        0000   118 ;               becomes machine specific to accomodate the differences
                        0000   119 ;               for scb and unexpected handlers page allocation.
                        0000   120 ;
                        0000   121 ;       25      Bob Bergazzi    Nov. 19, 1984   Version 8.0
                        0000   122 ;               Turn on cache in the ONLY_SCB routine.

                        0000   129 ;               Establish global location to store the primary cpu
                        0000   130 ;               identifier number for use by multi-processing in
                        0000   131 ;               routine MAP$IOSPACE.
                        0000   132 ;
                        0000   133 ;       28      R.E. Muse       9 May 85        Version 8.2
                        0000   134 ;
                        0000   135 ;               incorporate the only_attach routine
                        0000   136 ;
                        0000   137 ;       29      Bob Bergazzi    16-May-1985     Version 8.2
                        0000   138 ;               Fixed bug in DSP$CONFIG_ADP for CI750 ptable build.
                        0000   139 ;               Slot # and 3rd char of PAA0 were not right.
                        0000   140 ;
                        0000   141 ;       30      Bob Bergazzi    17-May-1985     Version 8.2
                        0000   142 ;               When auto-configuring CI750 ptable, we were trying to cause an
                        0000   143 ;               interrupt by setting MIN and MIE with one instruction. MIN
                        0000   144 ;               must be set first and MIE with a second instruction. This caused
                        0000   145 ;               the CI750 ptable to take the default values for TR and BR.
                        0000   146 ;
                        0000   147 ;       31      Bob Bergazzi    11-June-1985    Version 8.3
                        0000   148 ;               Change EXE$GL_TENUSEC and EXE$GL_UBDELAY to
                        0000   149 ;               ONLY$GL_TENUSEC and ONLY$GL_UBDELAY because the former
                        0000   150 ;               are set from the latter at boot time, and the former
                        0000   151 ;               symbols are now kept in the BOOTDRIVR module.
                        0000   152 ;               This is so the TIMEDWAIT macro in some bootdrivr modules
                        0000   153 ;               will work.
                        0000   154 ;
                        0000   155 ;       32      Ted Saleh       21-November-1985 Version 9.2
                        0000   156 ;               Added DSR$ONLY_CONSOLE_CONFIG to all ONLY modules.
                        0000   157 ;
                        0000   158 ;
                        0000   159 ;       33      Bob Bergazzi    7-Jan-1986      Version 9.1
                        0000   160 ;               Added DEF$Q_DEV, DEF$Q_DIR, SYS$SYSROOT, and SYS$DISK. These
                        0000   161 ;               were removed from the LOAD module so that the default directory
                        0000   162 ;               could be system specific.
                        0000   163 ;                                                                       ;G:2
                        0000   164 ;       34      Bob Bergazzi    12-Feb-1986     Version 10.0            ;G:2
                        0000   165 ;               Changed functionality of CI750 ptable to match version 6        ;G:2
                        0000   166 ;               of the CI780.BIN file.                                  ;G:2
                        0000   167 ;                                                                       ;G:3
                        0000   168 ;       35      Jim Shelhamer   10-Apr-1986     Version 10.0            ;G:3
                        0000   169 ;               Added ONLY_CPU section.                                 ;G:3
                        0000   170 ;                                                                       ;G:4
                        0000   171 ;               David Cearin    27-Oct-1987     Version 10.10           ;G:4
```

```
                        0000   172 ;               Added support for extended p-table format.                  ;C:4
                        0000   173 ;                                                                           ;C:5
                        0000   174 ;               David Gearin    16-Nov-1987     Version 10.10               ;C:5
                        0000   175 ;               Moved p-table initialization code for console devices.      ;C:5
                        0000   176 ;--

Assembler run totals	1879	00:00:05.05	00:00:10.41

```
The working set limit was 2900 pages.
216329 bytes (423 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1078 non-local and 39 local symbols.
1014 source lines were read in Pass 1, producing 80 object records in Pass 2.
47 pages of virtual memory were used to define 43 macros.
```

0000    121 ;       [15]    Bob Bergazzi    8-Apr-1986      Version 10.0        ;G:14
0000    122 ;               Force more code into cache after starting selftest. Symptom ;G:14
0000    123 ;               was seen on KDB50, BTO was set because cpu was prefetching  ;G:14
0000    124 ;               more than was originally thought.                   ;G:14
0000    125 ;                                                                   ;G:14
0000    126 ;       [14]    Bob Bergazzi    3-Apr-1986      Version 10.0        ;G:14
0000    127 ;               Changed instruction for starting self-test from a BISL to   ;G:14
0000    128 ;               a MOVL because the BISL is a read-modify-write type which   ;G:14
0000    129 ;               may have caused problems.                           ;G:14
0000    130 ;                                                                   ;G:14
0000    131 ;       [13]    Bob Bergazzi    31-Mar-1986     Version 9.3         ;G:14
0000    132 ;               After starting self-test, wait for 1ms before addressing    ;G:14
0000    133 ;               the node in order to avoid a machine check.         ;G:14
0000    134 ;                                                                   ;G:14
0000    135 ;       [12]    Bob Bergazzi    21-Mar-1986     Version 10.0        ;G:14
0000    136 ;               Addition to clear the NPE bit in BER after selftest, which  ;G:14
0000    137 ;               may get set due to a pass 5 BIIC bug.               ;G:14
0000    138 ;                                                                   ;G:14
0000    139 ;       [11]    Ted Salem       20-Aug-1985     Version 8.3         ;G:14
0000    140 ;               Added code in order to save the HSC port number     ;G:14
0000    141 ;               that is being used.                                 ;G:14
0000    142 ;                                                                   ;G:14
0000    143 ;       [10]    Bob Bergazzi    2-Aug-1985      Version 8.3         ;G:14
0000    144 ;               Added code to handle a machine check when           ;G:14
0000    145 ;               setting SST, in case cache is broken or turned      ;G:14
0000    146 ;               off.                                                ;G:14
0000    147 ;                                                                   ;G:14
0000    148 ;       [09]    Bob Bergazzi    20-June-1985    Version 8.3         ;G:14
0000    149 ;               Changed method of set start self-test bit,          ;G:14
0000    150 ;               so that machine check does not occur.               ;G:14
0000    151 ;                                                                   ;G:14
0000    152 ;       [08]    Bob Bergazzi    11-June-1985    Version 8.3         ;G:14
0000    153 ;               Changed BCI750 to CIBCI.                            ;G:14
0000    154 ;                                                                   ;G:14
0000    155 ;       [07]    Bob Bergazzi    May 31, 1985    Version 8.3         ;G:14
0000    156 ;               Change setting of SST from ASHL to BISL, also       ;G:14
0000    157 ;               setting STS with it.                                ;G:14
0000    158 ;                                                                   ;G:14
0000    159 ;       [06]    Bob Bergazzi    May 13, 1985    Version 8.2         ;G:14
0000    160 ;               Add support for BCI750.                             ;G:14
0000    161 ;                                                                   ;G:14
0000    162 ;       [05]    Bob Bergazzi    Apr. 2, 1985    Version 8.1         ;G:14
0000    163 ;               Restore SPT on errors.                              ;G:14
0000    164 ;                                                                   ;G:14
0000    165 ;       [04]    Jim Shelhamer   Mar 25, 1985    Version 8.1         ;G:14
0000    166 ;               Changed location of PALIB.MLB to WRKD$3:[DS.LIBRARIES]      ;G:14
0000    167 ;                                                                   ;G:14
0000    168 ;       [03]    Bob Bergazzi    Nov. 7, 1984    Version 7.1         ;G:14
0000    169 ;               Use supervisor's SPT instead of a fake SPT          ;G:14
0000    170 ;               This results in all of physical memory now          ;G:14
0000    171 ;               being mapped.                                       ;G:14
```

```

Assembler run totals	2693	00:00:12.61	00:00:19.23

```
The working set limit was 4000 pages.
408464 bytes (798 pages) of virtual memory were used to buffer the intermediate code.
There were 170 pages of symbol table space allocated to hold 2934 non-local and 177 local symbols.
3388 source lines were read in Pass 1, producing 182 object records in Pass 2.
40 pages of virtual memory were used to define 37 macros.
```

                                        ;       03      Removed DS_GETPARAM, unnecessary since P-code was removed
                                        ;               Roger Riggs, 28-May-1980, Version 5.4
                                        ;       04      Fixed to correctly return 0 in R1 if default answer was
                                        ;               given to DS$ASKSTR. Also fixed size of field in ASKDATA
                                        ;               Roger RIggs, 19-Jun-1980, Version 5.5
                                        ;       05      Fixed default value when prompt was disabled
```

```
                     0000     58 ;
                     0000     59 ;        06      Roger Riggs, 16-Oct-1980
                     0000     60 ;                Fixed bug that failed to give default values on prompt
                     0000     61 ;                in ASKDATA, ASKVLD, ASKADR.
                     0000     62 ;        07      - Jack Stansbury, 22-Oct-1981, Version 6.-
                     0000     63 ;                Changed the .PSECT CODE statement on line 117 that was
                     0000     64 ;                commented out (for some strange reason) to .PSECT CODE.
                     0000     65 ;                Also took out the $DS_HDRDEF statement since none of the
                     0000     66 ;                diagnostic program header symbols are used here!
                     0000     67 ;                Also fixed some truncation errors.
                     0000     68 ;                Also changed some messages to mixed case.
                     0000     69 ;                Also added calls to the QA_MAIN macro and DSQA for QA.
                     0000     70 ;                Also added .LIBRARY statements for $DS and $DIAG.
                     0000     71 ;
                     0000     72 ;        08      - Jack Stansbury, 30-Nov-1981, Version 6.5
                     0000     73 ;                Added some more code for the QA routines.
                     0000     74 ;
                     0000     75 ;        09      - Jack Stansbury, 5-Dec-1981, Version 6.6
                     0000     76 ;                Changed the entry masks on each of the .ENTRY lines so
                     0000     77 ;                that ALL the registers are saved (rather than only those
                     0000     78 ;                used). This is so that the QA dump routine can find all
                     0000     79 ;                the registers in the call frame set up for these
                     0000     80 ;                ASK routines.
                     0000     81 ;
                     0000     82 ;        10      Marion Baggett, 31-Mar-1982, Version 6.7
                     0000     83 ;                Changed all $DS_PRINT type statements to $PRINT form.
                     0000     84 ;
                     0000     85 ;        11      Marion Baggett, 7-Apr-1982, Version 6.7
                     0000     86 ;                Added macro $DS_TYPEDEF definition.
                     0000     87 ;

```
The working set limit was 2400 pages.
137253 bytes (269 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 349 non-local and 50 local symbols.
935 source lines were read in Pass 1, producing 56 object records in Pass 2.
34 pages of virtual memory were used to define 22 macros.
```

0000    28 ; FACILITY:     VAX DIAGNOSTIC SUPERVISOR.
0000    29 ;
0000    30 ; ABSTRACT:
0000    31 ;
0000    32 ; ENVIRONMENT:
0000    33 ;
0000    34 ; AUTHOR:       KEN CHAPMAN     10-NOV-77       VERSION 01.
0000    35 ;
0000    36 ; MODIFIED BY:
0000    37 ;                KEN CHAPMAN     02-FEB-78       VERSION 02 (ESSAA-3.07).
0000    38 ;       01       ADDED QUADWORD DATA CAPABILITY.
0000    39 ;       02       ADDED STRING MATCH FUNCTIO.
0000    40 ;                Roger Riggs     6-NOV-1978
0000    41 ;       03       ADDED KEYWORD MATCH FUNCTION AND MADE SOME SUBROUTINES
0000    42 ;                USEFUL FROM OTHER PARTS OF THE SUPERVISOR.
0000    43 ;       04       Modified keyword construct.
0000    44 ;                Dave Butenhof, 13-feb-1981, version 6.3
0000    45 ;       05       Add parse table command code for SYMBOL type, so CLI can
0000    46 ;                recognise $ and _ in section names.
0000    47 ;
0000    48 ;       06       - Jack Stansbury, 28-Oct-1981, Version 6.-
0000    49 ;                Fixed a few truncation errors. Also added .LIBRARY statements
0000    50 ;                for $DS and $DIAG.
0000    51 ;
0000    52 ;       07       - Dave Butenhof, 10-Nov-1981, version 6.-
0000    53 ;                Add new PARSE codes, CLI$K_COMMA and CLI$K_VALSEP.  The
0000    54 ;                former traverses the sequence "<blank>,<blank>", while the
0000    55 ;                latter traverses "<blank>(=|:)<blank>".  These will make
0000    56 ;                CLI simpler.  Added .LIBRARY for LIB, since I added CASE
0000    57 ;                macro useage
```

```
                        58 ;
                        59 ;       08      - Dave Butenhof, 11-Nov-1981, version 6.-
                        60 ;               Add another PARSE code, CLI$K_EOL to check for end of
                        61 ;               line (considering comments).
                        62 ;
                        63 ;       09      - Dave Butenhof, 11-Nov-1981, version 6.-
                        64 ;               Again, make things easier for CLI by adding extra (internal
                        65 ;               only) entry point for PARSE.  DSX$SUPERPARSE won't stop at
                        66 ;               physical end of line; it'll keep parsing the null string until
                        67 ;               told to stop.
                        68 ;
                        69 ;       10      - Dave Butenhof, 13-Nov-1981, version 6.5
                        70 ;               One more time...add CLI$K_CALL and CLI$K_RETURN functions
                        71 ;               for CLI convenience.  The parse table is just too complex.
                        72 ;               Also, CLI$K_BIFS to test subparse return code
                        73 ;
                        74 ;       11      - Dave Butenhof, 03-Feb-1982, Version 6.6
                        75 ;               Add Scan$File to allow wildcards (* and %) in file names.
                        76 ;               This is for DIRECTORY...CLI will allow them in RUN, etc;
                        77 ;               but it won't work too well.  Also, add a macro version of
                        78 ;               BREAKUP_FILE (for merging default file specs) here...it's
                        79 ;               much more code efficient than the bliss version.
                        80 ;
                        81 ;       12      Jack Stansbury, 15-Dec-1982, Version 6.10
                        82 ;               Fixed the code in TrvEol to fix a bug where a CLI$K_EOL was
                        83 ;               being done twice, and causing an error when a comment
                        84 ;               followed a DS command. The comment character was being
                        85 ;               skipped, but not the rest of the line after the '!'. Thus,
                        86 ;               the second time the TrvEol was called, R5 would point to the
                        87 ;               character after the '!'. Now I set R4 = 0 (the number of
                        88 ;               characters remaining in the line) and set R5 to point to the
                        89 ;               real end of the line (the NEWLINE character).
                        90 ;
                        91 ;       13      Bob Bergazzi    May 16,1983     Version 6.11
                        92 ;               Changed the order of the .LIB statements.
                        93 ;
                        94 ;       14      M. Baggett      Nov 16,1983     Version 6.13
                        95 ;               Allow device name of the form ' name$aaann' to be used as load
                        96 ;               devices.
                        97 ;
                        98 ;       15      RE MUSE         MAY 8,1984      Version 7.0
                        99 ;               Allow device names of the form 'node$ggan' to be used as load
                       100 ;               devices
                       101 ;
                       102 ;       16      M. Baggett      14-Nov-1984     Version 7.1
                       103 ;               Allow device names of the form '$m$ggan
                       104 ;
                       105 ;       17      M. Baggett      19-FEB-1985     Version 8.1
                       106 ;               Support ULTRIX file structure.

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	25	00:00:00.01	00:00:00.19
Command processing	928	00:00:00.27	00:00:00.83
Pass 1	566	00:00:01.61	00:00:03.03
Symbol table sort	0	00:00:00.09	00:00:00.08
Pass 2	24	00:00:00.58	00:00:01.23
Symbol table output	2	00:00:00.05	00:00:00.13
Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	5	00:00:00.18	00:00:00.33
Assembler run totals	1554	00:00:02.79	00:00:05.82

The working set limit was 2400 pages.
74202 bytes (145 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 289 non-local and 67 local symbols.
1126 source lines were read in Pass 1, producing 41 object records in Pass 2.
22 pages of virtual memory were used to define 15 macros.

Macro library statistics

;    0035  0      !
;    0036  0      !       The function of this module is to store two data structures:
;    0037  0      !       1) 8K of PCS patch bits (= 2 pages of 8-bit bytes). A patch bit
;    0038  0      !       indicates if the corresponding microword is patched.
;    0039  0      !       2) 1K of 80-bit patch microwords (= 20 pages of 8-bit bytes). The
;    0040  0      !       patch microword contains the actual patch.

;    0034  0      !
;    0035  0      !       This module loads the PCS microcode, which is contained in the
;    0036  0      !       PCSDATA module, into the PCS RAMs. The "PCS" consists of two parts:
;    0037  0      !       1) Patch bits, which indicate if a corresponding microword is patched,
;    0038  0      !       and 2) Patch microwords, which contain the actual patch.

                        42 ;                Added DSX$PRINTI similar to DSX$PRINTF but always prints even
                        43 ;                in APT mode. Changed prefix on print routines to DSX$PRINTx
                        44 ;
                        45 ;       02       Roger Riggs     12-Jun-78
                        46 ;                Added usermode cancel and setmode
                        47 ;
                        48 ;       03       Roger Riggs     1-OCT-1979
                        49 ;                Changed W^ to L^ on DSA$GL_FLAGS references
                        50 ;
                        51 ;       04       Roger Riggs, 14-Jan-1979, Version 5.2
                        52 ;                Added code to DSX$CVTREG to allow the user
                        53 ;                to specify a code for the mnemonic string instead of
                        54 ;                the string itself codes are used for transportable
                        55 ;                diagnostics and represent a generic type of data,
                        56 ;                i.e. UNIBUS map register.
                        57 ;
                        58 ;       05       Dave Butenhof 29-apr-80
                        59 ;                Use RMS for output if DS$V_BATCH flag is set (running
                        60 ;                under VMS batch/command file).
                        61 ;
                        62 ;       06       Dave Butenhof, 16-oct-1980, version 6.1
                        63 ;                Set flag DS$V_OUTPUT on PRINT call.
                        64 ;                Also have print use stack buffer for FAO output to avoid
                        65 ;                conflict with SCRIPT prompt formatting.
                        66 ;
                        67 ;       07       - Jack Stansbury, 28-Oct-1981, Version 6.-
                        68 ;                Added .LIBRARY statements for $DS and $DIAG. Fixed
                        69 ;                truncation errors.
                        70 ;
                        71 ;       08       - Dave Butenhof, 02-Nov-1981, version 6.-
                        72 ;                Fix truncation error.
                        73 ;
                        74 ;       09       - Dave Butenhof, 16-Nov-1981, version 6.5
                        75 ;                Enhance to provide capability of outputting a binary 'type
                        76 ;                code' byte preceding each and every message output by the
                        77 ;                Supervisor.  This is controlled by the SET [CLEAR] BINARY
                        78 ;                command.
                        79 ;
                        80 ;       10       - Jack Stansbury, 23-Mar-1982, Version 6.7
                        81 ;                Took out the RTypeMsg routine because it is now obsolete
                        82 ;                with typecoding and with the Print routine. Also added a
                        83 ;                "!/" to the message output by the print routine when
                        84 ;                Debug_The_Sucker has been set to one.
                        85 ;
                        86 ;       11       Jack Stansbury, 8-Apr-1982, Version 6.7
```

```
                                ;               Added code to the DSX$TypeOut routine to call the CRD
                                ;               routine. Also added a .Library statement for /$CRD/,
                                ;               the new CRD library. Also changed some statements to
                                ;               the new DS macros (Br_If_ ...).
                                ;
                                ;       12      Marion Baggett, 9-Apr-1982, Version 6.7
                                ;               Ordered .library statements.
                                ;
                                ;       13      Jack Stansbury, 12-Apr-1982, Version 6.7
                                ;               Changed the code in DSX$TypeOut a bit so that the CRD routine
                                ;               is not called if the TypeCode is CRD_AutoTest. This allows CRD
                                ;               Print's to go through without the CRD routine being called.
                                ;
                                ;       14      Jack Stansbury, 6-May-1982, Version 6.8
                                ;               Added code in DSX$TypeOut to supress outputting the binary
                                ;               typecode when CRD-AutoTest is running (which, in itself, implies
                                ;               that the BINARY flag has been set on).
                                ;
                                ;       15      Jack Stansbury, 24-July-1982, Version 6.9
                                ;               Added support for the Menu Test of CRD.
                                ;
                                ;       16      Bob Bergazzi    30-March-1983   Version 6.11
                                ;               Added guts of SET PAGE command: DSV$SHOWPAGE, DSV$SETPAGE, and
                                ;               in DSX$TYPE_OUT.
                                ;
                                ;       17      John Ciukaj,    2-Apr.-1983,    Version 6.11
                                ;               - Changed references to CRD bits in DSA Flags since
                                ;                 they were redefined to distinguish between online
                                ;                 and offline.
                                ;
                                ;       18      Peter Green     18-JUL-1983     Version 6.12
                                ;               Changed print macros to test R0 for status such that
                                ;               on error an immediate exit occurs instead of attempting
                                ;               to print the message.
                                ;
                                ;       19      Richard Brown   7-June-1984     Version 7.0
                                ;               Added null arguments to SYS$QIO call in DSX$TYPE_OUT.
                                ;               Changed channel number from TTIN to TTOUT in two $QIO
                                ;               calls in DSX$TYPE_OUT, prompting for user response
                                ;               to display next page of terminal output.
                                ;
                                ;       20      Ron Parker      21-Jan-1985
                                ;               Added test for CRD online condition
                                ;
                                ;       21      Amy Iorio       15-Feb-1985     Version 8.1
                                ;               Added routine for $DS_PRINTREV
                                ;
                                ;       22      Amy Iorio       18-Mar-1985     Version 8.2
                                ;               Modified Printrev to work with error
                                ;
                                ;       23      Amy Iorio       27-Mar-1985     Version 8.2
                                ;               Fix to Printrev (bits set and prlink print)
                                ;
                                ;       24      Ted Salem       8-April-1985    Version 8.2
                                ;               Added code to interlock all print services.
                                ;
                                ;       25      Amy Iorio       18-April-1985   Version 8.2
```

02D3    698          .Subtitle       DSX$Print Routine - Load type code byte
02D3    699 ;++
02D3    700 ; Functional Description:
02D3    701 ;
02D3    702 ;       This routine is the control point for Supervisor type coding.
02D3    703 ;       It sets the typecode byte to the proper value, and calls the
02D3    704 ;       desired PRINT routine.  Any print which does not go through
02D3    705 ;       this routine, and which does not set DS$GB_TYPECODE explicitly
02D3    706 ;       will have the default (current) type code [normally 0].
02D3    707 ;
02D3    708 ; Input Parameters:
02D3    709 ;
02D3    710 ;       4(ap)           Type code value (negative of typecode indicates
02D3    711 ;                       that code is 'sticky', and will not be cleared.
02D3    712 ;       8(ap)           Which PRINTx is desired
02D3    713 ;       12(ap)          Address of ASCIC format string
02D3    714 ;       16(ap)          First FAO argument (as in DSX$PRINTx routines)
02D3    715 ;                         .
02D3    716 ;                         .
02D3    717 ;                         .
02D3    718 ;
02D3    719 ; Output Parameters:
02D3    720 ;
02D3    721 ;       none
02D3    722 ;
02D3    723 ; Implicit Inputs:
02D3    724 ;
02D3    725 ;       none
02D3    726 ;
02D3    727 ; Implicit Outputs:
02D3    728 ;
02D3    729 ;       DS$GL_TYPECODE  set to input value.
02D3    730 ;
02D3    731 ; Side effects:
02D3    732 ;
02D3    733 ;       none
02D3    734 ;
02D3    735 ; Status returns:
02D3    736 ;
02D3    737 ;       none
02D3    738 ;--

                        1400          .Subtitle       DSX$CvtReg Routine - Mnemonic register conversion routine
09BB    1401 ;++
09BB    1402 ; FUNCTIONAL DESCRIPTION:
09BB    1403 ;
09BB    1404 ;       ASSOCIATES REGISTER BITS AND/OR FIELDS WITH ASCII MNEMONICS
09BB    1405 ;       GIVEN AN ASCII CONTROL STRING AND THE REGISTER CONTENTS
09BB    1406 ;       Instead of the mnemonic address a code may specified directing
09BB    1407 ;       CVTREG to use a predefined mnemonic string.  This allows
09BB    1408 ;       transportable diagnostics to format generic register values,
09BB    1409 ;       i.e. UNIBUS adapter MAP registers.
09BB    1410 ;
09BB    1411 ; CALLING SEQUENCE:
09BB    1412 ;

Assembler run totals	2069	00:00:06.25	00:00:11.72

The working set limit was 3400 pages.
255392 bytes (499 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 981 non-local and 140 local symbols.
1646 source lines were read in Pass 1, producing 106 object records in Pass 2.
65 pages of virtual memory were used to define 48 macros.

0000    35 ;
0000    36 ; ABSTRACT:
0000    37 ;       This module contains the bootstrap device driver for the
0000    38 ;       UDA 50 disks.
0000    39 ;
0000    40 ; ENVIRONMENT:  IPL 31, kernel mode, code must be PIC
0000    41 ;
0000    42 ; AUTHOR:  Kerbey T. Altmann,   CREATION DATE:  20-Nov-1981
0000    43 ;
0000    44 ; MODIFIED BY:
0000    45 ;
0000    46 ; [01] Dave Butenhof, 15-Apr-1982
0000    47 ;       Modify to run under VDS. Partic, change $BOOT_DRIVER macro
0000    48 ;       to exclude fields not supported by VDS, and have I/O entry
0000    49 ;       call init routine a each call (since diagnostics may be
0000    50 ;       run, etc. between calls).
0000    51 ;                                                                           ;G:2
0000    52 ;       David Gearin    06-Nov-1987                                         ;G:2
0000    53 ;       Modify move from RPB$W_UNIT from byte to word.                      ;G:2
0000    54 ;       This allows for access to large device #'s.                         ;G:2
0000    55 ;--

Psect synopsis output	2	00:00:00.02	00:00:00.07
Cross-reference output	3	00:00:00.04	00:00:00.04
Assembler run totals	1840	00:00:04.46	00:00:07.07

```
The working set limit was 2400 pages.
169684 bytes (332 pages) of virtual memory were used to buffer the intermediate code.
There were 90 pages of symbol table space allocated to hold 1676 non-local and 9 local symbols.
440 source lines were read in Pass 1, producing 109 object records in Pass 2.
20 pages of virtual memory were used to define 19 macros.
```

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	1
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]PAMAC.MLB;1	0
